(57) Abstract:

PROBLEM TO BE SOLVED: To shorten time for recognizing a necessary mail from mails which are read by a mail reading device.

SOLUTION: At the time of accessing to an information processor 100 from a telephone set 110 and reading a mail, the headers of the mails are outputted in order by a sound synthesis part 103. A user registers a sender or a subject or both of an unnecessary mail in a skip condition holding part 107 as a skip condition. At the time of reading a header part later, a skip condition judgment part 106 judges the condition and the mail which is fitted to the skip condition is not read. When the necessary mail is found, a sound synthesis part 103 outputs the context in accordance with an instruction.
